

Notes for Installing RedHawk™ Linux® 7.0 with Red Hat® Enterprise Linux® 7.0

Installation Notes

March 22nd, 2015

This page intentionally left blank

1. Introduction

RedHawk Linux is supplied with CentOS® Linux® DVDs, however installing RedHawk with Red Hat Enterprise Linux (RHEL) DVDs is also fully supported by Concurrent.

This document assists the user in installing the RedHawk 7.0 operating system onto a RHEL 7.0 distribution. Both RHEL 7.0 Workstation and RHEL 7.0 Server products are supported, but for brevity this document will generally refer to them both as simply RHEL 7.0.

The directions in this document supersede all others – they are specific to installing the software on Concurrent Computer Corporation’s RedHawk systems. Other information provided as part of this release, when it may contradict Concurrent’s directions, should be ignored and Concurrent’s directions in this document should prevail.

NOTE

“Red Hat,” “Red Hat Enterprise Linux” and “CentOS” are trademarks or registered trademarks of Red Hat, Inc. in the US and other countries. “RedHawk” is a registered trademark of Concurrent Computer Corporation. “Linux” is a registered trademark of Linus Torvalds. Red Hat, Inc. and Linus Torvalds are in no way connected with or associated with Concurrent Computer Corporation.

2. Requirements

You will need these resources to install RedHawk 7.0 onto a RHEL 7.0 distribution:

- A RHEL 7.0 Installation DVD or ISO
- A RedHawk 7.0 Installation DVD
- The *RedHawk Release Notes* document for RedHawk 7.0
- The `recommended-pkgs.txt` file that matches your RHEL 7.0 product

If you do not already have a RHEL 7.0 Installation DVD or ISO, you will also need:

- A current and valid Red Hat account login ID and password
- A system with an external Internet connection

Optionally, once you have completed the basic installation of the RedHawk system, if you wish to update all of the Red Hat provided RPM packages on the RedHawk system to their latest available versions, you will also need:

- A valid and unattached Red Hat subscription
- An external Internet connection on the RedHawk system you wish to update

NOTE

Upgrades from earlier versions of RedHawk to version 7.0 are not supported.

NOTE

If you already have a RHEL 7.0 Installation DVD or ISO, you can skip directly to Section 4, “Install RHEL 7.0,” below to begin the RHEL 7.0 installation.

3. Download the RHEL 7.0 Installation ISO

This section outlines several manual steps that you will need to perform over the Internet in order to download a RHEL 7.0 ISO image from the Red Hat Network.

3.1. Establish a Red Hat Account

If you do not already have a Red Hat account login you will need to create one via the Red Hat customer portal website. Navigate a web browser to the following URL:

<http://access.redhat.com>

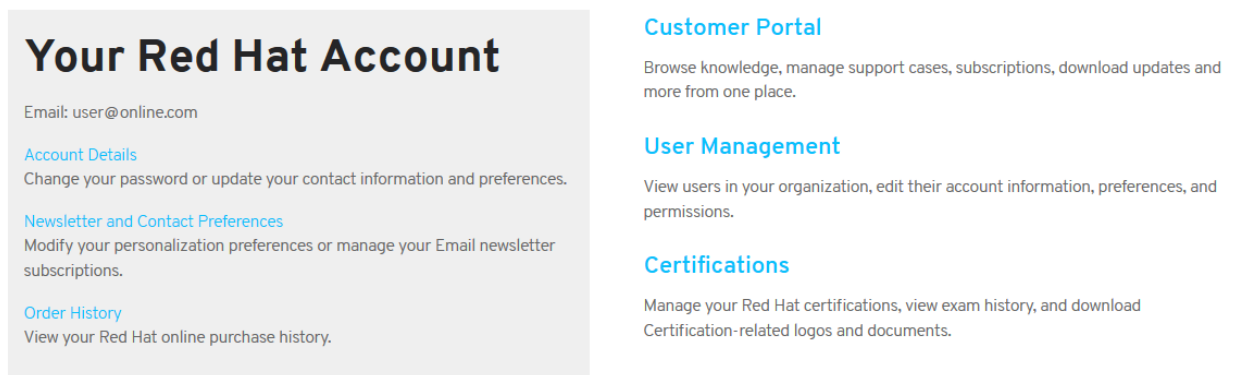

Click the *little person* icon at the upper right of the page and then click the Register link. Follow the registration instructions and enter all of the required information to successfully establish your new account.

NOTE

If you already have a Red Hat account with at least one active subscription then you can click the Log In link, enter your existing login information, and then skip directly to Section 3.3, "Download the RHEL 7 DVD ISO," below.

3.2. Purchase a Red Hat Support Subscription

After initially creating your account, you will be required to confirm the supplied email address and then log back into the customer portal. At this point you will see a screen similar to the following displayed:

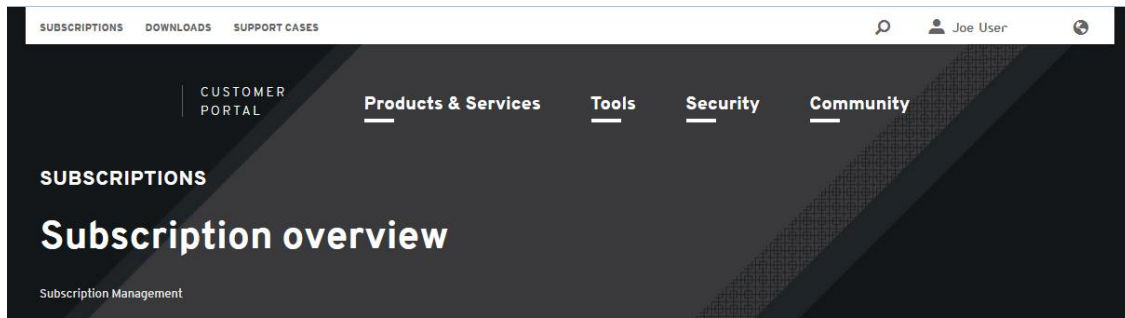

The screenshot shows a user interface for a Red Hat account. On the left, under the heading "Your Red Hat Account", there is a list of links: "Account Details" (Change your password or update your contact information and preferences), "Newsletter and Contact Preferences" (Modify your personalization preferences or manage your Email newsletter subscriptions), and "Order History" (View your Red Hat online purchase history). On the right, there are three main sections: "Customer Portal" (Browse knowledge, manage support cases, subscriptions, download updates and more from one place), "User Management" (View users in your organization, edit their account information, preferences, and permissions), and "Certifications" (Manage your Red Hat certifications, view exam history, and download Certification-related logos and documents).

Clicking on the Customer Portal link will take you to the main page of the customer portal. The appearance of the main page changes frequently as it is mostly used as an online billboard for promoting a variety of Red Hat features and products, however you should always see these buttons at the top left of the page:

Click on the Subscriptions button and you will be presented with a page similar to the following:

MY SUBSCRIPTIONS

No Active Subscriptions

- If you recently requested an evaluation or purchased a subscription directly from Red Hat, it may take a few moments for it to become available.
- If you have a 16-digit subscription activation number but have not manually activated your subscription, you can [activate your subscription now](#).

If you believe this is a mistake, [contact Customer Service](#).

0 Active subscriptions [VIEW ALL](#)

0 Ready to renew [🕒](#)

0 Recently expired [⚠️](#)

Take action

- [Activate a subscription](#)
- [Renew a subscription](#)
- [Purchase subscriptions](#)

Learn

- [Using the Customer Portal to Manage Subscriptions](#)
- [View all Subscription Management Documentation](#)
- [Subscription Packaging](#)

The above example page indicates that the account has 0 active subscriptions. Thus, before you can download the RHEL 7.0 DVD ISO you will need to purchase a subscription by clicking on the Purchase subscriptions link in the Take action section near the lower-right of the page.

After clicking on Purchase subscriptions, you will be taken to the Featured Products page. You should click on the View All Products link, as shown below, in order to see all of the possible products that you can purchase subscriptions for.

Featured Products [View All Products](#)

On the resulting All Products page there are many products listed, however customers installing RedHawk should generally choose among the various subscription support levels of these two main products:

- Red Hat Enterprise Linux Server
- Red Hat Enterprise Linux Workstation

For example, to purchase a Red Hat Enterprise Linux Workstation Self-support Subscription, click on the first add to cart button in the Red Hat Enterprise Linux Workstation subscription list, as shown below:

Red Hat Enterprise Linux Workstation		Prices in US dollars	
Self-support Subscription (1 year)	\$179	USD	add to cart
Standard Subscription (1 year)	\$299	USD	add to cart

Once the chosen product subscription has been added, your shopping cart will appear and you can click the Checkout Now button to enter your payment information. You will be given a summary of the transaction and options to add various additional products and services, etc. but eventually you will be able to press the Submit Your Order button to complete your product subscription purchase.

Once your account has at least one active subscription, you will be able to download DVD ISO images as described in the next section.

3.3. Download the RHEL 7.0 DVD ISO

Before you can install RedHawk 7.0, you must first install RHEL 7.0 on the system, which requires that you download an appropriate RHEL installation DVD ISO from the Red Hat customer portal. Log in to your Red Hat account and return to the customer portal, and click on the Downloads link that you will see at the top of the main page:

You will be taken to the Product Downloads page, where you can scroll down until you see the Red Hat Enterprise Linux product link:

[Red Hat Enterprise Linux](#)

Click on Red Hat Enterprise Linux product link, and choose the product variant, version and architecture that you wish to download. For example, choose the following settings to select the RHEL 7.0 Workstation 64-bit product.

Product Variant: **Version:** **Architecture:**

NOTE

Be careful to select the 7.0 version, regardless of what the default version may be. At the time of this writing, 7.1 was the default, but that DVD ISO version is not compatible with the RedHawk 7.0 installation instructions.

Once the RHEL 7.0 product has been correctly selected, scroll the page down see the Binary DVD link that is associated with this product. In this example, press the Download Now button to begin downloading the RHEL 7.0 Workstation 64-bit Installation DVD.

[RHEL 7.0 Binary DVD](#)

rhel-workstation-7.0-x86_64-dvd.iso SHA-256 Checksum: 5a53ed3e1e30a8c645aa78dc4215598ad302c12084b0dd45d179f917212e0005

[DOWNLOAD NOW](#)

3.92 GB

Once the DVD ISO has downloaded successfully you should now be ready to proceed with the next section. However, it is always recommended to use the `sha246sum` command on Linux to verify that the DVD ISO checksum matches the checksum displayed above before continuing.

NOTE

Microsoft ® Windows ® operating system users can download and install the CoreUtils package from the gnuwin32.sourceforge.net project to get a native version of `shasum` which can be used to verify the DVD ISO checksum.

4. Install RHEL 7.0

Once the desired RHEL 7.0 DVD ISO is fully downloaded, burn the ISO to a physical DVD using your preferred DVD burning software, and then complete section 5.1.1 in the *RedHawk Release Notes* in order to perform a RHEL installation.

NOTE

The screens shown in the RedHawk Release Notes are from CentOS 7.0; the RHEL 7.0 screens will all have a different color scheme, however the contents of each screen will be mostly identical to the CentOS 7.0 screens.

NOTE

Concurrent does not recommend registering the system with the Red Hat Network during the RHEL installation. If you wish to install RHEL updates after you have completed the RedHawk 7.0 installation, you can register the system and attach a subscription at that time. See section 7.0, “(Optional) Update Installed RHEL Packages,” below for more information.

Once the RHEL 7.0 installation is finished, proceed to the next section.

5. Install Recommended Packages

This section details the steps that are required in order to install the set of Concurrent recommended packages.

5.1. Download the `recommended-pkgs.txt` File

Concurrent publishes *recommended packages* lists for customers supplying their own Red Hat software. Installing all of the recommended packages will ensure that your system will closely match systems that are shipped directly by Concurrent with CentOS software pre-installed. These packages are not required, but having the packages installed will help to provide a consistent RedHawk user experience and will also assist Concurrent technical support.

If you do not already have one of these files, you will need to download one from Concurrent's Software Documentation Library website. Use a web browser to surf to this URL:

<http://redhawk.ccur.com/docs/document.cgi>

You should see a page similar to the following displayed:

redhawk.ccur.com

Software Documentation Library

All manuals are provided in PDF format and can be read using [Adobe Acrobat Reader](#) on Linux or Windows platforms.

Concurrent manuals are organized into trees rooted at the base operating system distribution.

Select your base operating system distribution from the list below, or use the "find" feature to locate a specific document.

Type in a regular expression to locate a document **title** or **publication number**.

- [RedHawk Linux](#)
- [PowerMAX OS](#)
- [Red Hat Linux](#)
- [Other](#)

Click on RedHawk Linux, then click on RedHawk Server, and then click on RedHawk Linux 7.0. The page should now look similar to the following:

- [RedHawk Linux](#)
 - [RedHawk Server](#)
 - [RedHawk Linux 2.3](#)
 - [RedHawk Linux 4.1](#)
 - [RedHawk Linux 4.2](#)
 - [RedHawk Linux 5.1](#)
 - [RedHawk Linux 5.2](#)
 - [RedHawk Linux 5.4](#)
 - [RedHawk Linux 6.0](#)
 - [RedHawk Linux 6.3](#)
 - [RedHawk Linux 6.5](#)
 - [RedHawk Linux 7.0](#)
 -  [RedHawk Linux OS Version 7.0 Release Notes](#)
 -  [RedHawk Linux User's Guide - Version 7.0](#)
 -  [RedHawk Linux Frequency-Based Scheduler \(FBS\) User's Guide - Version 7.0](#)
 - [Installing on RHEL](#)
 -  [Archive](#)
 - [RedHawk Embedded](#)
 - [Compilers](#)
 - [FAQ](#)
 - [Hardware](#)
 - [Libraries](#)
 - [Tools](#)
- [PowerMAX OS](#)
- [Red Hat Linux](#)
- [Other](#)

Next, click on the Installing on RHEL link that is listed under RedHawk Linux 7.0 and the following files will appear for download:

- [Installing on RHEL](#)
 -  [RedHawk 7.0 w/ Red Hat Installation Notes](#)
 - [rhel-7.0-svr-x86 64-recommended-pkgs.txt](#)
 - [rhel-7.0-ws-x86 64-recommended-pkgs.txt](#)

The first link under Installing on RHEL is a link to the latest version of this document that you are currently reading. The other links are the `recommended-pkgs.txt` files that are appropriate for the various versions of RHEL.

Download the `recommended-pkgs.txt` file that matches the version of RHEL you are installing.

5.2. Transfer the RHEL 7.0 DVD (if necessary)

You should already have downloaded the RHEL 7.0 ISO image, however if you only have access to a physical RHEL 7.0 DVD you will need to temporarily transfer the DVD to your system's hard drive in order to follow these procedures.

Insert the RHEL 7.0 DVD into the system's optical media tray and issue the following command to temporarily create a copy of the RHEL 7.0 DVD on the hard drive.

```
-- as root --
dd if=/dev/cdrom of=/tmp/rhel7.0-dvd.iso
```

After this command completes, remove the RHEL 7.0 DVD from the optical media drive as it will no longer be needed during the rest of this procedure.

If you have access to the original RHEL DVD ISO image that was downloaded from Red Hat, simply ensure that it is placed in `/tmp` with the name `rhel7.0-dvd.iso` before continuing.

5.3. Loopback Mount the RHEL 7.0 DVD ISO Image

Issue the following commands to loopback mount the copy of the RHEL 7.0 DVD ISO image.

```
-- as root --
# yum clean all
# mkdir -p /mnt/rhel7.0-dvd
# mount -o loop /tmp/rhel7.0-dvd.iso /mnt/rhel7.0-dvd
```

After these commands complete, the contents of the RHEL 7.0 DVD ISO will be accessible under the `/mnt/rhel7.0-dvd` mount point.

NOTE

The software installation in upcoming steps will require the RHEL DVD ISO image to be continuously loopback mounted. You may wish to put the above mount command into `/etc/rc.local` to ensure that the ISO will be automatically re-mounted each time the system is rebooted.

5.4. Create a Repository to Access the RHEL 7.0 Image

Using your preferred text editor, create a file named `/etc/yum.repos.d/rhel7.0-dvd.repo` with the following contents:

```
[rhel7.0-dvd]
name=rhel7.0-dvd
baseurl=file:///mnt/rhel7.0-dvd
enabled=1
gpgcheck=0
```

Once this yum repo file is in place, RPM dependencies should automatically be satisfied from the mounted RHEL 7.0 DVD ISO image.

To verify that the RHEL DVD repository is now set up correctly, issue the following command:

```
-- as root --  
# yum repolist
```

You should see output similar to the following displayed:

```
[root@ihawk ~]# yum repolist  
Loaded plugins: langpacks, product-id, subscription-manager  
This system is not registered to Red Hat Subscription Management.  
You can use subscription-manager to register.  
repo id                repo name                status  
rhel7.0-dvd            rhel7.0-dvd             4,600  
repolist: 4,600  
[root@ihawk ~]#
```

If you do not see a similar output, review the above steps to make sure that everything is mounted and configured correctly.

5.5. Install Recommended Base Packages

To install the recommended packages on a freshly installed RHEL 7.0 system, issue the following command as root on your system (this example assumes that you are using 64-bit RHEL Workstation and that the `recommended-pkgs.txt` file is in the current directory):

```
# yum -y install $(<rhel-7.0-ws-x86_64-recommended-pkgs.txt)
```

Refer to section 5.1 above if you do not yet have an appropriate `recommended-pkgs.txt` file. This command will produce many lines of output and may run for several minutes depending on the performance of the current system.

NOTE

After installation completes, do not reboot the system. Proceed to the next step.

6. Install RedHawk Linux

The system is now ready for RedHawk and subsequent software to be installed. Continue following section 5.2 of the *RedHawk Release Notes* to complete the installation.

NOTE

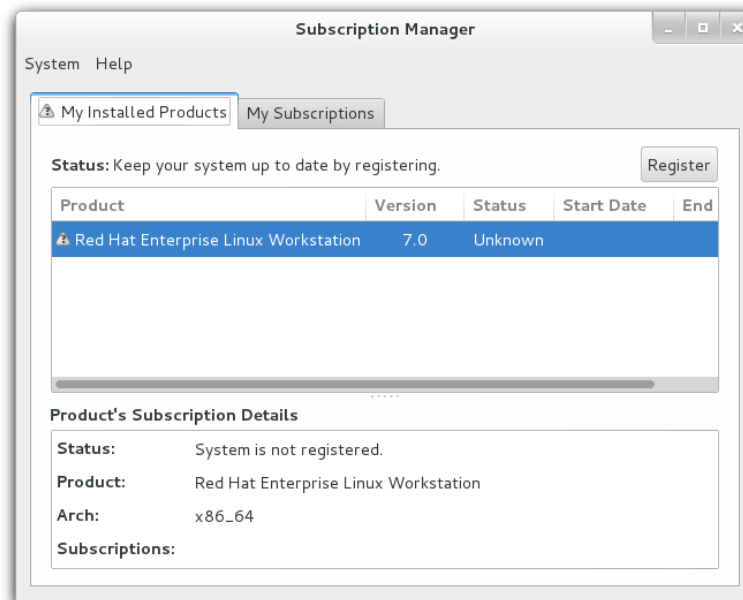

The recommended packages installed in Section 5.5 above should adequately satisfy the dependencies of RedHawk™ and NightStar™ software. However, the installation of additional software packages may require other RHEL 7.0 base packages that have not yet been installed. During the installation of additional software packages, ensure that the RHEL 7.0 DVD ISO is loopback mounted in order to have dependencies pulled in automatically as necessary. Be sure to delete the RHEL 7.0 DVD ISO file after all software installation has completed and also remove or disable the `/etc/yum.repos.d/rhel7.0-dvd.repo` file.

7. (Optional) Update Installed RHEL Packages

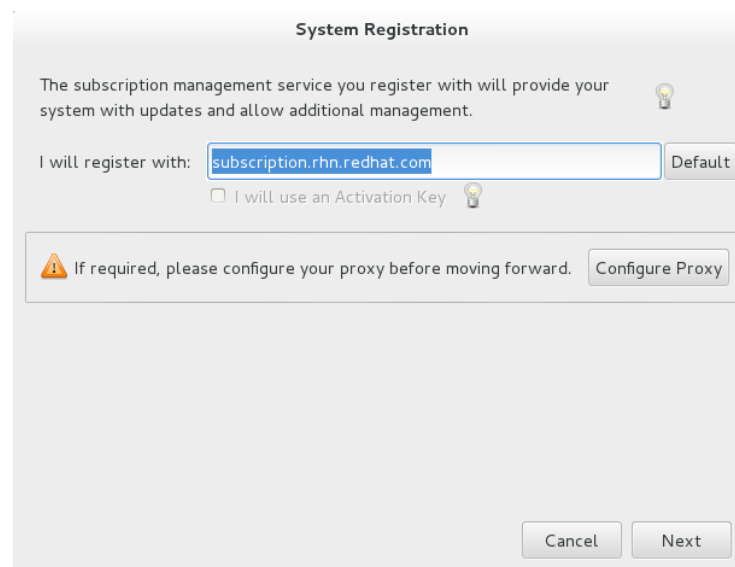

Once a RedHawk system is fully installed using the approach detailed above, you may optionally choose to install all of the latest RHEL package updates that have been released to-date by Red Hat. The following sections detail the steps required to register the system with the Red Hat Network, attach a subscription and update all installed RHEL packages to their latest available versions.

7.1. Invoke The Red Hat Subscription Manager

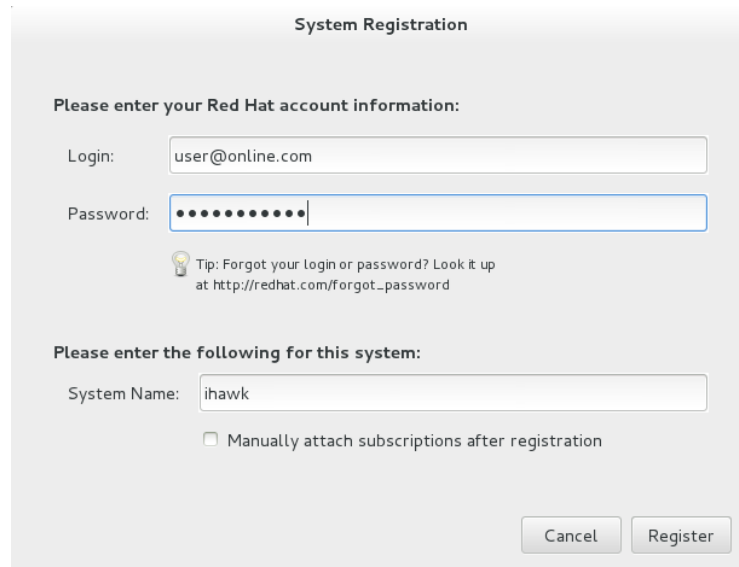

First, log into the system in graphical mode as the root user and invoke the Red Hat Subscription Manager tool. You can start the tool by invoking the `subscription-manager-gui` command in a terminal window, or via the Applications menu by navigating to System Tools ⇒ Red Hat Subscription Manager. After invocation, a window similar to the following will appear on the screen:

Click the Register button to register the system within the Red Hat Network, and a window similar to the following will next appear on the screen:

Click the Next button unless you are using a Red Hat Satellite (*the use of a Red Hat Satellite is not covered in this document*). You will then be presented with the following authentication screen:

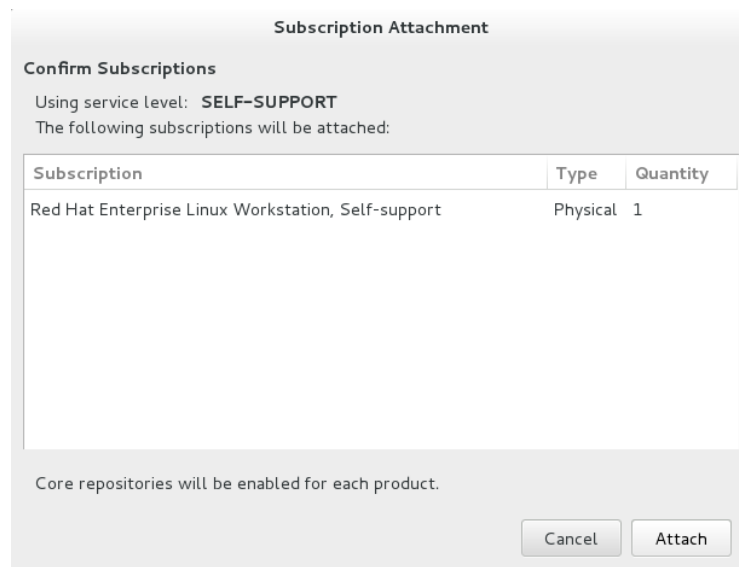

The image shows a 'System Registration' dialog box. It has two main sections. The first section is titled 'Please enter your Red Hat account information:' and contains a 'Login:' field with the text 'user@online.com' and a 'Password:' field with ten dots. Below these fields is a tip: 'Tip: Forgot your login or password? Look it up at http://redhat.com/forgot_password'. The second section is titled 'Please enter the following for this system:' and contains a 'System Name:' field with the text 'ihawk'. Below this field is a checkbox labeled 'Manually attach subscriptions after registration' which is currently unchecked. At the bottom right of the dialog are two buttons: 'Cancel' and 'Register'.

Enter your Red Hat account login and password, and also choose a unique name for the System Name field; the name defaults to the system's host name, which in most cases will be a unique and adequate name to use. Then, click the Register button to continue.

NOTE

Do not check the checkbox next to Manually attach subscriptions after registration; if you do then the Subscription Manager will not automatically choose a correct matching subscription for the software installed on the system.

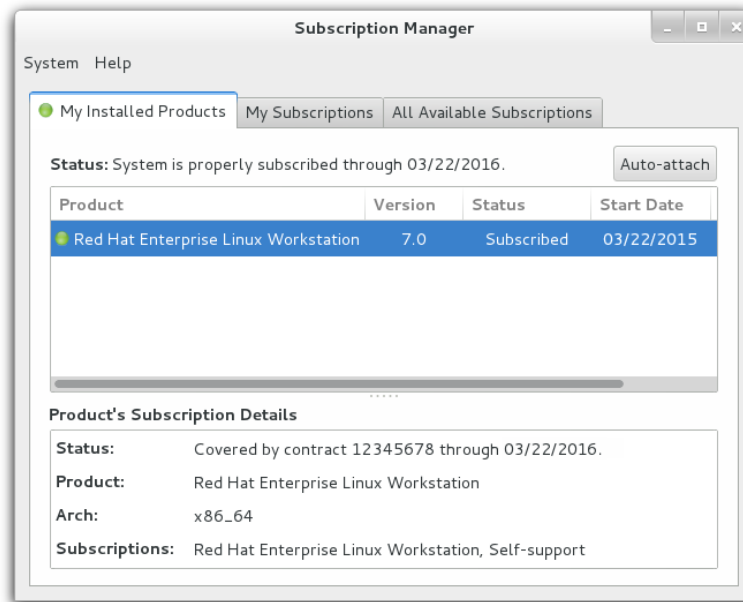

You will now see a confirmation window similar to the following displayed:

The image shows a 'Subscription Attachment' dialog box. It has a title bar 'Subscription Attachment' and a section titled 'Confirm Subscriptions'. Below this, it says 'Using service level: SELF-SUPPORT' and 'The following subscriptions will be attached:'. There is a table with three columns: 'Subscription', 'Type', and 'Quantity'. The table contains one row: 'Red Hat Enterprise Linux Workstation, Self-support', 'Physical', and '1'. Below the table, it says 'Core repositories will be enabled for each product.' At the bottom right of the dialog are two buttons: 'Cancel' and 'Attach'.

Subscription	Type	Quantity
Red Hat Enterprise Linux Workstation, Self-support	Physical	1

Press the Attach button to confirm the subscription attachment and you should now see a window similar to the following displayed:

This window confirms that the system has been properly registered and subscribed. Press the top right **X** button or select the System ⇒ Quit menu item to exit the Subscription Manager tool.

7.2. Enable the Optional RPMs Repository

After you have registered and attached a subscription to the system, you can choose to enable various RPM repositories that are supplied by Red Hat. Of particular interest to RedHawk users is the RHEL optional RPMs repository. For example, to enable this repository on a RedHawk system built from a RHEL 7.0 Workstation distribution, issue the following command as the root user:

```
-- as root --  
# subscription-manager repos --enable=rhel-7-workstation-optional-rpms
```

This command may take a few moments to run, but when it completes it will confirm that the optional repository has been enabled for the current system.

7.3. Update Installed RHEL Packages

Finally, issue the following command as the root user to download and install the latest versions of the RHEL packages that you have installed on your system:

```
-- as root --  
# yum -y update
```

You can also run this command without the “-y” option if you just wish to see which updates are available; without the “-y” option, the command will prompt you to continue and you can choose to continue or exit out if you wish. This command may take quite a while to complete, depending on how many updates are available at the time of invocation.

Please contact Concurrent Technical Support if you have any problems during any stage of this installation (support@ccur.com or 1-800-245-6453).
